**We will be happy to carry out a free site review with no obligation**

- Review your waste management operation
- Consult on your waste disposal and recycling
- Calculate and propose opportunities to increase profitability
- Support or produce any project planning
- Highlight process optimisations

**Increase profit, reduce costs and spend less time on disposal!**

Your internal processes can be optimised and labour savings achieved through the use of the AutoLoadBaler. High compaction rates achieve maximum 24 tonne payloads, producing mill sized bales meaning lower transport costs and increased profit.

**We have the right solution, to any waste problem**

## The AutoLoadBaler in retail

**More time for your core business**

**Profitable disposal of your recyclable material!**

**With the collection trolley and automatic filling your teams have more time for your core business – and more time for your customers!**

## Time-intensive disposal

### High personnel expenditure and long walking distances

In the retail trade lots of cardboard accumulates as packaging waste material every day. As soon as the products are unpacked in the store, the cardboard packaging must be disposed of. The staff collect the cardboard packaging in trolleys or manually by hand before walking long distances to the outside where the compactor/baler or containers are placed. Once outside the cardboard packaging is filled into the existing equipment or bin by hand.

The result is a time-consuming method of disposal that is linked to lots of manual labour and steals time from the core business. The processes or equipment used is time consuming and not cost efficient.

If you aren't baling and are using bins, you are paying your waste company to take your waste away, to make further monies from the material!

Remove this cost and generate a profit for your business!

## AutoLoadBaler: More time for your core business

### More time for your core business – more time for sales!

The filled collection trolley easily inserts into the side of the AutoLoadBaler and the baler is filled automatically. There is no need to flatten the cardboard first and staff no longer have to fill the cart or feed the baler manually. Labour savings are achieved through the higher volume filled in the collection trolley and because a shorter distance is travelled to the baler.

Savings of up to 500 hours per annum per retail store can be achieved. So the staff have more time for the core business.

The disposal is independent of container changing times and the ramp and storage area can be used for the core business. Uniform mill size bales deliver maximum 24 tonne payloads.
